Spike Systems Unveils Retract-A-Spike: A Flexible Vehicle Security Solution for Fleet Facilities

PHOENIX, AZ — July 28, 2026 — Spike Systems, a leading provider of traffic control and vehicle security solutions, today announced the launch of Retract-A-Spike, a removable, low-profile vehicle access deterrent designed to help fleet facilities protect vehicles from unauthorized removal while maintaining normal day-to-day operations.

Developed with the unique needs of fleet and vehicle-storage environments in mind, Retract-A-Spike provides facilities with a practical way to increase vehicle security when needed—without permanently restricting access or disrupting daily operations.

The system is designed for applications including rental car facilities, fleet yards, vehicle storage compounds, logistics centers, and service facilities. Retract-A-Spike can be quickly deployed when additional security is required and concealed when it is not, allowing facilities to adapt their vehicle access control based on operational needs.

The 15-foot standard Spike Lane is designed to span a vehicle access point, helping prevent vehicles from bypassing the security system. Its low-profile design allows it to remain unobtrusive when not in use, while its removable construction provides flexibility for facilities that may not need a permanent vehicle barrier.

Retract-A-Spike requires no power, making it a straightforward option for locations where electrical infrastructure is unavailable or where a manually deployed security solution is preferred.

The launch expands Spike Systems' portfolio of vehicle access and perimeter security products, which includes surface-mounted and high-security traffic control systems used in parking, transportation, and perimeter security applications.

Retract-A-Spike is now available from Spike Systems. Fleet operators, rental car companies, vehicle storage facilities, and other organizations interested in learning more or requesting a quote can contact the Spike Systems sales team at sales@spikesystems.com.

"Retract-A-Spike addresses a very specific challenge we saw in the fleet industry: how do you increase vehicle security without creating a permanent obstacle to everyday operations?" said **Jose Pineda** of Spike Systems. "We wanted to create a solution that gives facilities greater control over when and where vehicle access needs to be restricted. Retract-A-Spike delivers that flexibility in a simple, purpose-built system."
